Art Unit: 2633

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 2-15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As to claims 2 and 15, it is not clear about "...an optical modulator for receiving said stimulated emission light and a shading control signal for interrupting light emission and producing and outputting transmission signal light by changing an amount of transmission of said stimulated emission light according to said shading control signal; ...". Figures 2-6 each show an optical modulator 20 that receives only a drive signal from drive circuit 80, not receiving a shading control signal.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Le et al. (US Patent No: 5,343,324).

Regarding claim 1, Le teaches an optical transmission device (figs. 1, 4), comprising: a current source for outputting a drive current (the power supply source that drives the laser, such as the one shown in fig. 1); a semiconductor laser (laser, fig. 1) for converting the drive current into a stimulated emission light and outputting the same (for example, the light generated by

such laser that is transmitted over fiber 13 to modulator 14' of fig. 4 ); a drive circuit (50, fig. 4) for converting a transmission data signal (the user input signal RF, fig. 4) and a shading control signal (the DC bias signal 41, fig. 4) for interrupting light emission into a modulation control signal (the output signal from the bias T device 50) and outputting the same (col. 6, lines 47-54); and an optical modulator (14', fig. 4) for receiving the stimulated emission light and the modulation control signal and changing an amount of transmission of the stimulated emission light by the modulation control signal thereby generating transmission light signal (col. 3, lines 1-7, col. 7, lines 11-15).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to M. R. Sedighian whose telephone number is (571) 272-3034. The examiner can normally be reached on M-F (from 9 AM to 5 PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jason Chan can be reached on (571) 272-3022. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
